

FARM FIELDS

» Where something grows, how it grows, even the seed stock from which it's grown can be important determinants of quality. Our standards demand that only sources meeting our strict qualifications, such as fields in the least disturbed and most natural environments available, be selected.

Quality is GNLD's highest priority! Everything that goes into every GNLD product must first meet our stringent quality requirements. Every supplier and every raw material must qualify before it can be used by meeting our strict demands for purity, potency, consistency, origin, and many other quality-critical factors. Through our integrated global supply structure all of this is monitored and managed by teams of highly skilled people in a state-of-the-art quality assurance program that is unsurpassed in our industry. The batch code that appears on every single GNLD product acts as a window into that system that allows us to track every ingredient from its point of origin to its ultimate consumption.

Nowhere is the rigor and benefits of this system more apparent than in the vast array of plant derived phytonutrients that make up the core of our nutritional supplement product line. From Tre-en-en Grain Concentrates to whole food Carotenoids to the berry-derived polyphenols in Tré, through this system we can literally track plant-sourced ingredients "From the Farm to the Table." This assures you of the product purity, potency, consistency, value, and effectiveness for which GNLD is legendary.

From the FARM To the TABLE

RAW CROP ANALYSIS

» Because of these same demanding standards, crops are continually analyzed for nutrient content and quality.

PROCESSING

» Process is another key determinant of quality. That's why only state-of-the-art equipment guarantees the purest extractions and concentrates with an absolute minimum of processed alteration.

QUARANTINE, LAB ANALYSIS AND CONFIRMATION, RELEASE

» Purity is crucial to maintaining quality. All raw materials are held under strict quarantine and cannot be released until laboratory tests for purity and potency are verified. Only then is the product delivered to the raw materials warehouse.

MANUFACTURE

» On site equipment combines various raw materials into different forms with maximum efficiency, guaranteeing consistency from batch to batch.

MORE Q.C. AND LABORATORY ANALYSIS

» Leading-edge science continues to define GNLD's quality control. All final products are tested and certified by the most reliable scientific methods to ensure safety, quality, and effectiveness.

Q.C./Q.A. INSPECTIONS AND RETAIN STORAGE

» Ongoing inspection and retention guarantee a future of quality. Meticulous inspection continues on the packaging line. Samples are retained and collected to facilitate further tracking.

PRODUCT DELIVERED

» Even after GNLD products are delivered right to your door, batch numbers on every label allow us to answer your questions on ingredients or quality.

PRODUCT ON THE TABLE

» It's time for you, your family, and your friends to enjoy the high quality and many benefits of GNLD products.

Each GNLD product is the end result of top-quality work by leading scientists, researchers, and nutrition professionals, work that is based in state of the art technology and manufacturing and the very latest science. This guarantees you the very best products in the world, every step of the way—from the Farm to the Table.
